11.1 Formulae and functional groups

Hard 2 / Original practice worksheet

Name: _____ Date: _____

1 A carboxylic acid has the formula C3H7COOH. State the total number of carbon atoms and write its molecular formula.

(Total for question 1 is 2 marks)

2 Describe how the formulae of successive members of a homologous series differ.

(Total for question 2 is 1 mark)

11.1 Formulae and functional groups

Hard 2 / Original practice worksheet

Name: _____ Date: _____

3 An alkane and an alkene each contain four carbon atoms. Give both molecular formulae and explain the difference in hydrogen atoms.

(Total for question 3 is 3 marks)

4 Draw two different structural formulae for compounds with the molecular formula C4H10.

(Total for question 4 is 2 marks)
